

How to Use Your Interactive Codex

You now have a custom-built, interactive "digital museum" for your research. Here is how to bring it to life:

1. Save and Open Locally

- **Copy the Code:** Click the "Copy" icon on the HTML file I generated.
- **Create the File:** Open a text editor (like Notepad or TextEdit) on your computer, paste the code, and save it as `index.html`.
- **View it:** Double-click that file. It will open in your web browser exactly as it appeared in the preview.

2. Host it Online (Free Options)

To share the link on your Facebook profile or YouTube bio, you need to "host" the file:

- **GitHub Pages (Highly Recommended):** Create a free GitHub account, upload the `index.html` file to a "Repository," and enable "Pages" in the settings. You will get a URL like `yourname.github.io/veil-cartography`.
- **Netlify Drop:** Go to [Netlify Drop](#), drag and drop the folder containing your `index.html` file, and it will instantly give you a live link.
- **Tiiny.host:** Another "drag and drop" service that is very fast for single-page sites.

3. Use it for Social Media Content

Since your research focuses on "mapping what is hidden," this webpage is a great visual tool:

- **Screen Recordings:** Use a screen recorder (like Loom or OBS) to film yourself navigating the "Archonic Spheres" or the "Cinema" section. Use these clips for **TikToks** or **Instagram Reels**.
- **Link in Bio:** Put the hosted link in your Facebook "About" section and YouTube "Links." Instead of sending people to a static document, you are sending them to an "Interactive Codex."

4. Further Customization

If you want to change anything, just ask! I can:

- **Add more films:** If you want to include *Inception* or *Dark City* in the Cinema section.
- **Expand the Rituals:** If you have more specific breathwork or journaling prompts from your research.
- **Connect to Mailing List:** We can add a "Join the Newsletter" button that links to your sign-up page.
