

HOW DO I USE THESE OPTIONS

Your screenshots show two powerful Perplexity Pro features: **Scheduled Searches** (recurring automated queries) and **Computer Workflows** (guided multi-step automations). Here is how to use both.

Scheduled Searches & Notifications (Screenshot 1)

This lets Perplexity run the same query on a schedule and deliver results to you automatically.

- **Create from scratch:** Type what you want tracked into the prompt box (for example: *"Send me a daily summary of AI news every morning"*), pick a model, then hit the arrow to set the schedule and delivery method.^[1] ^[2]
- **Use a preset:** Click one of the cards like **News Digest**, **Market Forecast**, or **Tech Insights** to start with a pre-built template. These are configured for specific frequencies and topics.^[1]
- **Choose delivery:** You can receive results in-app, by email, and/or as a mobile notification. You can also set weekday-only schedules.^[2]
- **Manage schedules:** The **Scheduled Searches** list at the bottom shows active or paused tasks. You already have one paused schedule about finding cheapest return flights. You can edit, pause, or delete from there.^[1]
- **Price Alerts:** In the **Price Alerts** section, click **New Alert** to pick a stock or cryptocurrency and set a target price. When it hits that price, Perplexity runs a query and notifies you.^[3]

Computer Workflows (Screenshot 2)

Workflows are pre-packaged guided tasks where Perplexity Computer handles research, drafting, and formatting for you.

- **Pick a workflow:** Browse categories like **For you** or **Marketing**. For your social media and online selling work, useful ones include:
 - **Post creator:** Drafts multiple social media post variations optimized for engagement.^[4]
 - **Slide creation:** Researches a topic and returns a polished presentation.^[4]
 - **Product teardown:** Captures screenshots and analyzes pricing, features, and onboarding of any product.^[4]
 - **Competitive intelligence:** Monitors competitor launches and pricing on a recurring schedule.^[4]

- **Run it:** Click a workflow, provide the required input (a URL, topic, or document), and Computer executes the steps. It can browse the web, generate files, and deliver structured output.^[5] ^[6]
- **Schedule workflows:** You can set workflows to run asynchronously on a daily, weekly, or monthly basis so they continue working in the background.^[5]

Connecting the Two

You can combine these features. For example, set up a **Scheduled Search** to run a **Competitive intelligence** workflow weekly, or schedule the **Post creator** to draft content every morning for your **Veil Cartography** profiles. Price Alerts can also be useful if you track resale market prices or auction trends for your online buying and selling.

Which type of task would you like to automate first—content creation for Veil Cartography, product/market research, or travel/price tracking?

✱

HOW DO I USE FOR MY SOCIAL POSTING AND DO I NEED CREDITS/

Your screenshot shows custom **Skills** already built and enabled for **Veil Cartography** and social platforms. You activate them inside the **Computer** chat by typing their name, and yes, they consume credits from your monthly allowance.^[16]

How to Use These Skills for Social Posting

Since your skills are set to **Manual**, they only trigger when you explicitly mention their name in a Computer conversation.^[17]

- **For Instagram content:** Type `veil-cartography-instagram` followed by your request, e.g., *“draft three carousel captions about sacred geometry symbols”*.^[16]
- **For Facebook content:** Type `facebook-page` and ask, e.g., *“write a post announcing a new blog article in the Veil Cartography voice”*.^[16]
- **For brand strategy and bios:** Type `spill-the-tee-profiles` to generate or update social media bios, brand documents, and content pillars across YouTube, Facebook, and Instagram.^[16]
- **General brand tasks:** Type `veil-cartography` or `veil-cartography-website` for website copy or cross-platform content aligned with your brand identity.^[16]

Credit Costs and Limits

Yes, Computer uses credits, and tasks vary in cost depending on how many steps and web searches they require.^[18] ^[19]

- **Monthly allowance:** Max subscribers receive 10,000 credits per month; unused credits expire at the end of each billing cycle.^[18]

- **Typical cost:** A straightforward social caption or post idea might cost a few dozen to a few hundred credits. Complex multi-step workflows (deep research, slide creation, or competitor analysis) can burn 1,000–2,000+ credits each.^[20]
- **Avoid waste:** Vague prompts trigger expensive clarification loops. Be specific about the platform, topic, and tone so Computer completes the task in one pass.^[17]
- **Check your balance:** Click **Account > Usage and credits** in your left sidebar to see what you have left and adjust your spending cap if needed.^[21]

Tips to Save Credits and Speed Up Posting

- **Reuse your best prompts:** Once you find a phrasing that works (e.g., *“veil-cartography-instagram write a 150-word post with three relevant hashtags”*), save it in TickTick or Notion so you can paste it quickly.
- **Batch content:** Ask Computer to generate a full week’s worth of posts in one request rather than running separate tasks.
- **Schedule with Workflows:** You can pair these skills with the **Workflows** tab (seen in your earlier screenshot) or **Scheduled Searches** to automate recurring drafts, though scheduled Computer tasks also draw from the same credit pool.^[22]

Are you currently on the Max plan, or are you trying Computer through a trial? That will determine whether you need to upgrade or top up credits to keep using it regularly.

IM CONFUSED I DONT HAVE ANY CREDITS WHAT AM I PAYING FOR

You’re paying for Perplexity Pro, not for an active pool of usage-based Computer credits right now. Your invoice shows a Pro subscription charged at \$20 plus \$4 UK VAT, total \$24, for May 12 to June 12, 2026.^[34] ^[35]

What your payment covers

- Your invoice explicitly says “**Thanks for subscribing to Perplexity Pro**”, so the monthly charge is for the Pro plan itself.^[34]
- Perplexity says Pro remains available with “generous usage limits for most users,” and Pro subscribers also get a high volume of Deep Research queries.^[36] ^[37]
- Perplexity also states that **Computer is available to all Pro subscribers**, including access to advanced models, skills, and connectors.^[38]
- Pro users additionally receive a recurring **\$5 monthly PPLX API credit**, which is separate from Computer usage-based credits.^[39]
- Perplexity’s changelog also says Pro subscribers start each month with **5 video generation credits**.^[40]

Why your credits show zero

- Your screenshot is specifically the “Available usage-based credits” section, and it clearly shows 0 available credits plus the message “You’re out of credits. Add more or enable auto-refill below to never get interrupted.”^[35]
- That means the metered credit wallet for usage-based Computer activity is empty, not that your whole Pro subscription is missing.^[35] ^[38]
- The row showing “Bonus credits” with 4,000 granted on April 13, 2026 and an expiry of June 13, 2026 indicates you were given a credit grant at some point, but the page also shows your currently available amount is still 0.^[35]
- Your screenshot also shows auto-refill is off, so once that credit balance ran out, Computer usage that depends on those credits would stop until more are added.^[35]

What this means in plain English

- You are paying for Pro access and Pro features, not for an always-full Computer credit balance.^[38] ^[34]
- Think of it as two layers: subscription access gives you the Pro plan and eligibility to use Computer, while usage-based credits are the spendable balance for metered Computer activity.^[34] ^[38] ^[35]
- That is why you can still see Computer, Skills, and related menus in your account, but the credits panel says you are out of credits.^[41] ^[38] ^[35]

What to check next

- Open Account → Usage and credits and look for any detailed history under Credit usage to see whether those 4,000 bonus credits were already consumed.^[35]
- If you want to keep using Computer tasks that rely on usage-based billing, you would need to click Add credits or turn on auto-refill.^[35]
- If your goal is to understand whether Pro alone should cover more than this, the cleanest reading from your documents is: you definitely have Pro, and your usage-based Computer credit wallet is currently empty.^[34] ^[35]

Most likely answer

- You are paying \$24/month including VAT for Perplexity Pro.^[34]
- You are not currently paying for an active extra block of usage-based Computer credits, because your screenshot shows that balance is zero.^[35]
- So the confusion comes from seeing Computer access in the product, while the separate metered credit balance has already run out or is not currently funded.^[38] ^[35]

Would you like me to help you read that page line by line and tell you exactly which Perplexity features you can still use right now without adding more credits?

Yes what can I do or use

Yes — you can still use a lot of Perplexity, because your invoice shows you are subscribed to Perplexity Pro through June 12, 2026, even though your separate usage-based credit balance is currently zero. The main thing you appear to be missing is spendable Computer credits, not your Pro subscription itself.^[47] ^[48] ^[49]

You still have Pro

- Your invoice confirms you are paying for Perplexity Pro, billed at \$20 plus \$4 UK VAT, total \$24.00.^[48]
- Perplexity says Pro remains available with generous usage limits for most users.^[50]
- Perplexity also says Computer is available to all Pro subscribers, but Max subscribers continue to receive monthly credits and higher spend limits, which suggests Pro access and usage-based credits are not the same thing.^[47]

What you can use now

- You should still be able to use normal Perplexity search/chat as part of your Pro plan.^[50] ^[48]
- You should still have Pro Search, which Perplexity describes as nearly unlimited for Pro subscribers.^[51]
- You should still have Deep Research, because Perplexity says Pro subscribers receive a high volume of Deep Research queries.^[52]
- You should still be able to upload files into regular Perplexity searches for summaries, explanations, and extraction of key points.^[51]

What is likely blocked

- Your usage-based credits page shows Available credits: 0, with a warning that you are out of credits and need to add more or enable auto-refill.^[49]
- Because that page specifically says “Add credits to use Computer”, heavy Computer actions that rely on that metered balance are the features most likely to stop working until you top up.^[49]
- That probably includes more advanced agent-style tasks such as running multi-step automations, some workflows, or Skills that invoke Computer actions rather than simple chat.^[53] ^[47] ^[49]

What you can still do for posting

- You can still use regular Pro chat to ask for caption ideas, hashtag sets, post rewrites, hooks, carousel outlines, and content calendars without necessarily using Computer.^[48] ^[51]
- You can still use Deep Research to research topics for Veil Cartography posts, such as symbolism, ancient sites, or trending angles for educational content.^[52]

- You can still upload a draft post, screenshot, or notes file and ask Perplexity to **improve** tone, shorten it, repurpose it for Instagram/Facebook, or turn it into a week of posts.^[51]

Simple rule to follow

- If you are using ordinary Perplexity chat, Pro Search, Deep Research, or file analysis, you likely still have useful access under Pro.^{[50] [52] [51]}
- If you click into Computer, Skills, or Workflows and it tries to run a task that depends on the usage-based wallet, your zero-credit balance is the likely reason it will not complete.^{[53] [47] [49]}

Would you like me to give you a **safe list of 10 things to try right now** that should work on your current Pro plan without adding credits?

✱

what would I use on free plan

On the free plan, you would mainly use Perplexity for everyday search/chat, a small amount of deeper research, limited Pro Search, and basic file-based questions. It is useful for testing the product, but the free plan has tighter limits than Pro on advanced usage.^{[60] [61] [62]}

What free gives you

- Regular search from the main search bar, with real-time web answers.^[62]
- Focus mode, which lets you narrow results toward specific source types such as academic journals or social media.^[62]
- File upload in the search bar, so you can drag in a document and ask for summaries or quick insights.^[62]
- Search history, saved items in Collections, and access to the Discover feed from the sidebar.^[62]

Free plan limits

- Free users get **limited access to Pro Search** rather than the extended access that Pro subscribers receive.^[61]
- Perplexity's getting-started guide says free users can use Pro Search **five times every four hours**.^[62]
- Deep Research is available to everyone, but non-subscribers only get a **limited number of answers per day**, while Pro users get a much higher volume.^[60]
- Free users also get **three Premium searches per month**, while Pro users get five per month.^[63]

What this means for you

- On free, you could still research post ideas, ask for caption drafts, summarize articles, and upload notes or screenshots for quick content help.^[62]
- For social posting, free would be fine for occasional use, such as asking for one Instagram caption, a short content outline, or a rewrite of a Facebook post.^[62]
- If you want to do this heavily every day, the limits on Pro Search and Deep Research would become noticeable faster on free.^{[60] [62]}

What you would lose vs Pro

- Pro gives extended daily access to Pro Search and increased model selection, while free access is limited.^[61]
- Pro also gives a much higher volume of Deep Research queries than free.^[60]
- Perplexity describes Pro as offering more generous usage for people who need more regular, advanced research and content work.^[64]

Best use of free

- Use free for light research, idea generation, quick summaries, and occasional file analysis.^[62]
- It is a good fit if you only need Perplexity a few times a day and do not rely on heavy research workflows.^{[60] [62]}
- It is a poor fit if you want frequent deep content planning, repeated advanced searches, or ongoing workflow-style use.^{[61] [60]}

Would you like a simple free vs your current Pro plan checklist for social posting tasks like captions, hashtag research, and content calendars?

✱

How do I cancel and get a refund

To cancel, go to your Perplexity account settings and stop the subscription from the billing area; to get a refund, you would need to contact Perplexity support, because refund handling depends on how and where you subscribed. Your invoice shows this is a website subscription billed directly by Perplexity AI, not an Apple or Google Play in-app purchase.^[75]
^[76]

Cancel subscription

- Open your Perplexity account and go to the subscription or billing section in settings.^[75]
- Because your invoice is from Perplexity.ai, you should cancel it on the website rather than through Apple or Google.^{[76] [75]}
- Perplexity's help center says you must cancel your existing web subscription before starting a different billing setup, which confirms web subscriptions are managed directly

through the site.^[75]

Refunds

- Perplexity says refunds for website subscriptions are processed in the **same currency as the original transaction**.^[75]
- If you paid in USD, the refund is issued in USD; if you paid in local currency, it is returned in that local currency.^[75]
- Your invoice shows you were charged **\$24.00 USD total**, so any approved refund would normally be handled against that original billing currency and amount.^{[76] [75]}

Best next step

- Use the support contact shown on your invoice: support@perplexity.ai.^[76]
- In your message, include your invoice number 4ERVQE5I0003, the billing date May 12, 2026, and a short explanation that you believed Computer credits were included and want cancellation plus a refund review.^{[77] [76]}
- Keep the request clear and polite, and ask both for **immediate cancellation** and whether your purchase is **eligible for refund**.^[76]

Message to send

- Subject: Cancel Pro subscription and refund request
- Body: "Hello, I'd like to cancel my Perplexity Pro subscription and request a refund review. My invoice number is 4ERVQE5I0003, billed on May 12, 2026 for \$24.00 USD. I'm confused about the usage-based credits and believed my subscription included access I could use immediately. Please cancel renewal and let me know whether I'm eligible for a refund." ^{[77] [76]}

Would you like me to turn that into a shorter, ready-to-send email you can copy exactly?

✱

Was offered 3 months half price so will see if I use the Pro features

That sounds sensible. At **half price for three months**, the best approach is to treat Pro as a trial period and focus on the features most likely to help your actual work: social content creation, research, and file-based planning.^[80]

Best things to test

- Pro Search for everyday research, because Pro subscribers get nearly unlimited access compared with the tighter free limit.^[81]
- Deep Research for bigger topics, such as researching symbolism, ancient sites, content angles, or competitors for Veil Cartography.^[82]

- **File upload** for practical work, such as dropping in drafts, notes, screenshots, invoices, or content plans and asking for summaries, rewrites, or action steps.^[81]
- **Computer only** for a few carefully chosen tasks, because Pro includes access to Computer, skills, and connectors, but your separate usage-based credit balance can still limit how much you do there.^{[83] [84]}

Best tests for your work

- Ask for **one week of social captions** from a single topic, then see whether the outputs are good enough to save you real time on Instagram, Facebook, YouTube, or TikTok.^[85]
- Use **Deep Research** to build one strong content brief for Veil Cartography, for example a post series on sacred geometry, hidden meanings in language, or Gnostic themes.^[82]
- Upload one of your existing drafts or screenshots and ask Perplexity to **turn it into platform-specific versions**, since you already work across multiple channels.^{[86] [81]}
- Try one **reselling or product research** task as well, since you also do online selling and may get value from faster listing text, comparisons, or buyer-facing copy.

What to avoid

- Do not judge Pro based only on **Computer credits**, because that is just one part of the product and your current usage-based credit wallet is empty.^{[84] [83]}
- Do not spend the three months wandering through menus; instead, test whether it saves you time on the same tasks you already repeat every week.^{[87] [86]}
- If a task works just as well in normal Pro chat or Deep Research, use that first before trying heavier Computer flows.^{[82] [81]}

Good scorecard

- Ask yourself: did it help you create posts faster, research better, or stay more consistent with Veil Cartography? ^[85]
- If it saves you even a few hours a week on captions, planning, and repurposing content, the discount may be worth it for those three months.^{[88] [86]}
- If you mostly use it like free search and never touch Pro Search, Deep Research, or file workflows, then it may not be worth keeping after the offer ends.^{[81] [82]}

Simple plan

- **Week 1:** Test Pro Search for daily questions and quick content ideas.^[81]
- **Week 2:** Test Deep Research for one serious Veil Cartography topic.^[82]
- **Week 3:** Test file uploads with drafts, screenshots, or planning docs.^[81]
- **Week 4:** Decide whether it meaningfully improves your posting workflow and research output.^[87]

A very practical way to use the offer is this: for the next few weeks, use Pro to produce one caption set, one research brief, and one repurposed multi-platform post every day. That will

show quickly whether it earns its keep in your business.^[86]

Would you like a 7-day checklist of exactly what to test in Pro for Veil Cartography?

✱

Yes and how do I use other features like artifact and workflow

Yes — and for you, the smartest way to test Pro is to use it as a **content engine** for Veil Cartography, not just as a search box. The most useful extra features to test are **Artifacts** for creating usable outputs and **Workflows** for repeatable guided tasks.^{[95] [96] [97]}

7-day test plan

- **Day 1:** Ask Perplexity for 10 Veil Cartography post ideas based on your core themes, then choose 3 to develop.^[95]
- **Day 2:** Use Deep Research to build one strong content brief on a topic like sacred geometry, hidden etymology, or Gnostic symbolism.^[98]
- **Day 3:** Paste one rough idea and ask for platform versions: Instagram caption, Facebook post, TikTok hook, and YouTube Short description.^{[99] [100]}
- **Day 4:** Upload a draft, screenshot, or notes file and ask Perplexity to rewrite it into a cleaner post.^[100]
- **Day 5:** Create an **Artifact** such as a content calendar, caption bank, carousel outline, checklist, or reusable post template.^[96]
- **Day 6:** Test one **Workflow** like **Post creator** or **Slide creation** and compare whether it saves time over normal chat.^[97]
- **Day 7:** Review what actually helped: faster captions, better research, stronger hooks, or easier repurposing.

Artifacts

Artifacts are best thought of as **usable outputs** rather than just answers. Instead of only giving text in chat, Perplexity can produce something structured such as a report, spreadsheet, dashboard, or simple app-like output.^[96]

- Use Artifacts when you want a **finished thing** you can work from later, for example:
 - A 30-day content calendar.
 - A caption bank by platform.
 - A spreadsheet of post ideas.
 - A dashboard tracking themes, post dates, and status.^[96]
- For your work, good prompts would be:
 - “Create an artifact: 30 Veil Cartography post ideas sorted by pillar and platform.”^[95]

- “Create an artifact: weekly content calendar with columns for hook, caption, CTA, platform, and status.”
- “Create an artifact: reusable Instagram carousel template for Veil Cartography word decodes.”
- Think of an Artifact as something you can reuse, edit, or export, not just read once.^[96]

Workflows

Workflows are guided task templates that break a bigger job into steps. In your screenshot, Perplexity describes them as **guided flows that turn complex tasks into simple steps.**^[97]

- For your brand, the most useful ones are likely:
 - **Post creator** for social post drafting.^[97]
 - **Slide creation** for turning research into presentations or educational content.^[97]
 - **Product teardown** if you want to analyze competitors or tools.^[97]
 - **Competitive intelligence** if you want recurring monitoring in your niche.^[97]
- How to use one:
 - Open Computer → Workflows.^[97]
 - Pick the workflow, for example **Post creator**.^[97]
 - Enter one clear input, such as topic, audience, tone, and platform.
 - Review the output and save the parts worth reusing.
- Use Workflows when the task is **repeatable**, such as weekly content creation or structured research.^[97]

Best prompts for you

- “Create a week of Veil Cartography posts from this topic: the hidden meaning of the word sincere, one version each for Instagram, Facebook, TikTok, and YouTube.”^[99]
- “Create an artifact with 4 content pillars, 10 post ideas per pillar, and CTA suggestions.”^{[101] [102]}
- “Use Deep Research to create a sourced brief on sacred geometry in ancient traditions, then turn it into a 5-post content series.”^[98]
- “Use the Post creator workflow to draft three short posts in the Veil Cartography voice for Facebook and Instagram.”^[97]

Best way to learn it

- Start with **normal Pro chat** for idea generation.^[100]
- Move to **Deep Research** when you need substance and sources.^[98]
- Use **Artifacts** when you want a reusable asset, like a calendar, spreadsheet, or structured plan.^[96]

- Use **Workflows** when you want Perplexity to handle the same kind of multi-step task again and again.^[97]

For you, the easiest first win would be this: create one **Artifact** called “Veil Cartography Weekly Posting System,” then use **Post creator** to fill it every week. Would you like me to draft the exact prompts for that so you can paste them straight into Perplexity?

✱

Yes

Yes — here are the exact prompts to paste, built around your Veil Cartography brand, your existing social channels, and your preference for practical, reusable content workflows rather than theory-heavy advice. For you, the best test is to use normal chat for idea generation, Artifacts for reusable planning assets, and Workflows for repeatable posting tasks.^{[116] [117] [118] [119]}

Artifact prompts

Use Artifacts when you want Perplexity to create something you can keep using, such as a calendar, template, spreadsheet, or structured content bank. These prompts are designed around the Veil Cartography themes and pillars you already developed.^{[120] [117] [118]}

- “Create an artifact called ‘Veil Cartography Weekly Posting System’. Make a 4-column weekly plan for YouTube, Instagram, Facebook, and TikTok. Include columns for topic, hook, main point, CTA, status, and repurpose notes. Use a dark, elegant, esoteric brand tone.”^{[116] [121]}
- “Create an artifact with 30 Veil Cartography post ideas grouped by pillar. Use themes like hidden meanings in words, sacred geometry, Gnostic ideas, symbolism, and mapping what has been obscured. For each idea, give me a hook, a one-sentence angle, and the best platform.”^{[121] [117] [120]}
- “Create an artifact that is a caption bank for Veil Cartography. Make 20 short Instagram captions, 20 Facebook post versions, 10 TikTok hooks, and 10 YouTube Short descriptions. Keep the voice mysterious, intelligent, and clear rather than fluffy.”^{[116] [121]}
- “Create an artifact called ‘Word Decode Series’. Build a reusable template for posts that explain one word at a time. Include sections for the word, claimed hidden meaning, historical caution note, hook, visual idea, short caption, long caption, and CTA to follow Veil Cartography.”^{[116] [120]}

Workflow prompts

Workflows are guided flows that turn a bigger task into simple steps, which is useful for repeatable things like post creation and topic research. In your case, the best ones to test first are **Post creator**, **Slide creation**, and **Competitive intelligence**.^[119]

- For **Post creator**, paste: “Create 5 social posts for Veil Cartography from this topic: ‘Grammar = Grimoire’. Make one stronger educational version, one more provocative

version, one softer beginner-friendly version, one Facebook discussion post, and one Instagram caption. End each with a CTA.” [\[122\]](#) [\[119\]](#)

- For **Slide creation**, paste: “Turn this topic into a 6-slide educational deck for Veil Cartography: ‘Sacred geometry as a map of hidden order’. Each slide should have a title, 3 bullet points, and a short presenter note I can adapt into a post or video.” [\[120\]](#) [\[119\]](#)
- For **Competitive intelligence**, paste: “Monitor accounts, creators, or websites in the esoteric, symbolism, sacred geometry, and alternative history space. Show me what topics they repeat, what formats they use, and what content gaps Veil Cartography could fill.” [\[117\]](#) [\[119\]](#) [\[116\]](#)
- For **Product teardown**, paste: “Analyze this creator site or course page and tell me how they position the offer, structure the message, use visuals, and create curiosity. Then suggest how Veil Cartography could do it in a more distinctive way.” [\[120\]](#) [\[119\]](#)

Best everyday prompt

Because you already cross-post and repurpose content, your best everyday prompt is one that turns a single idea into multiple platform-ready pieces. This is the one I would save in TickTick or Notes and reuse daily. [\[123\]](#) [\[116\]](#)

- “Take this Veil Cartography idea and turn it into a full posting pack. Give me: 1 YouTube Short title and description, 1 Instagram caption, 1 Facebook post, 1 TikTok hook, 5 hashtags, 1 image or slide idea, and 1 CTA. Keep the tone dark, intelligent, mystical, and concise. Topic: [paste topic here].” [\[121\]](#) [\[116\]](#)

Simple way to use them

A very practical routine for you would be: first ask normal chat for ideas, then turn the best idea into an Artifact, then use a Workflow only when you want a polished multi-step output. That matches the way you already build systems, reuse material, and prefer step-by-step execution. [\[124\]](#) [\[118\]](#) [\[119\]](#)

- Monday: run the **30 post ideas artifact** prompt. [\[118\]](#) [\[117\]](#)
- Tuesday: pick 1 topic and run the **full posting pack** prompt. [\[116\]](#)
- Wednesday: use **Post creator** to improve and vary the strongest post. [\[119\]](#)
- Thursday: turn the same topic into a **slide deck** or carousel structure. [\[124\]](#) [\[119\]](#)
- Friday: schedule or repurpose the outputs across your channels. [\[123\]](#)

Best first test

The single best first test for Pro is this: create one Artifact called “Veil Cartography Weekly Posting System,” then fill it each week with one reusable posting pack from one topic. That will tell you quickly whether Pro is saving you real time on Veil Cartography rather than just giving you interesting answers. [\[118\]](#) [\[120\]](#) [\[116\]](#)

Which one do you want to run first: the weekly posting Artifact or the Post creator workflow?
