

Synthesis Template: From Playbook to Prescriptions

Once your busy mum sends you her AI playbook output, use this template to:

1. **Analyze** what the AI suggested
 2. **Filter** down to the 2-3 highest-payoff tools
 3. **Create** personalized prescription cards
 4. **Present** them to her in a warm, jargon-free way
-

Step 1: Read Her Playbook & Identify Key Patterns

When you receive her output, look for:

Her Stated Pain Points:

- What did she say drains her most? (meal planning, email, teen coordination, bills, etc.)
- What hobby is she missing?
- What's her ideal outcome?

What the AI Recommended:

- Which tools did it suggest?
- How many recommendations were there?
- Which ones directly address her pain point?

Quick Assessment:

- ✓ Does this tool solve a real problem *she mentioned*?
- ✓ Is it simple enough for her learning style?
- ✓ Would it free up at least 30 min/week?

If the answer to all three is yes → **This is a candidate prescription.**

Step 2: Select the Top 2-3 Tools

Rank by:

1. **Time savings** (highest first)
2. **Learning friction** (lowest first)
3. **Relevance** to her stated goals

Example Ranking:

- **#1: Meal Planning Tool** — 3 hours/week saved, 5-min setup, directly addresses her "meal planning hell"
- **#2: Email Batching System** — 2 hours/week, 10-min setup, solves her "constant email interruptions"
- **#3: Teen Coordination Batching** — 1.5 hours/week, behavior change (not tool), protects her time for hobbies

You should have **2-3 prescriptions max**. More feels overwhelming.

Step 3: Create Her Prescription Card

For **each tool**, create a card like this:

 PRESCRIPTION: [TOOL NAME]

Her bottleneck:
[Specific problem she mentioned. E.g., "You spend 3 hours/week on meal planning without a system."]

The solution:
[Tool name + what it does in 1 sentence, plain English]

How to use it:
1. [First action]
2. [Second action]
3. [Done]

Expected result:
[Specific time/energy saved. E.g., "Meal planning drops from 3 hours to 20 minutes/week."]

Why she doesn't need to understand how it works:
[Reassurance + simple analogy. E.g., "You're not asking it to learn your preferences over time. You're just asking it to organize what you tell it. Like texting a friend for a recipe list."]

Confidence milestone:
Try this once. Notice the time saved. Then decide if you want the next tool.

Step 4: Example Prescriptions (Based on Busy Mum Profile)

PRESCRIPTION 1: Meal Planning with Claude

Her bottleneck: You spend 3+ hours every week planning meals from scratch. No system. Notes scattered everywhere. Same task, same time sink.

The solution: Claude (an AI text assistant) can generate a full week's meal plan + shopping list in 5 minutes.

How to use it:

1. Go to [Claude.ai](https://claude.ai) (free, no sign-up needed)
2. Say: "Plan a week of meals. I have a teen who likes pasta, I want veggie options, budget ~£80, easy cooking."
3. Claude gives you meals + shopping list organized by store section
4. Copy list to your phone. Go shopping. Done.

Expected result: Meal planning drops from 3 hours to 20 minutes/week. After week 2, even faster (reuse template from week 1).

Why you don't need to understand how it works: You're not asking it to learn your preferences over years. You're just asking it to organize what you tell it. Like texting a friend "What should I cook?" and they give you a list.

Confidence milestone: Generate one meal plan this week. See how long it takes. See if it works. That's your baseline. Then decide if you want to use it every week.

PRESCRIPTION 2: Bill/Decision Clarification

Her bottleneck: Insurance quotes, bills, decisions sit in your head for days. You procrastinate, reopen them, procrastinate again. Mental energy drain.

The solution: Claude (same tool) can clarify confusing options and recommend a decision.

How to use it:

1. Go to [Claude.ai](https://claude.ai)
2. Dump all the info: "I have 3 insurance quotes with different deductibles and prices. I go to the doctor 2x/year. Help me decide."
3. Claude makes a simple comparison + recommends one
4. You make decision in 10 min instead of hours

Expected result: Decision-making drops from "2 hours scattered across days" to "10 minutes, done, stop thinking about it." Mental load lifted.

Why you don't need to understand how it works: It's like asking a smart friend: "I'm confused. What should I do?" Claude just organizes the info so the answer becomes obvious.

Confidence milestone: Next time you have a decision sitting in your head, dump it into Claude. Get your answer. See how fast the mental fog clears.

PRESCRIPTION 3: Teen Coordination Batching

Her bottleneck: 4–5 hours/week fragmented by his questions via WhatsApp/text. Constant interruptions. No protected time for yourself.

The solution: Not an AI tool—a workflow change. Send him one clear weekly message that pre-answers his likely questions.

How to use it:

1. Sunday evening: Think "What will he probably ask this week?" (homework help time, activity schedule, money, etc.)
2. Draft a message: "I'm available for homework help Monday 4–5pm and Wednesday 6–7pm. For activities, tell me by 5pm the day before. Sports money: £20 approved."
3. Send it via WhatsApp/text
4. Fewer mid-week interruptions. Batched homework help. You get your afternoons back.

Expected result: Teen questions drop from "constant all day" to "batched during specific times." You free 2–3 hours/week. **More importantly: you protect your Saturday afternoons for painting.**

Why this works: He's not being difficult. He just doesn't know your boundaries. Clear expectations = fewer interruptions.

Confidence milestone: Try it one Sunday. Draft one message. Send it. Notice how many fewer questions you get mid-week. Then use the freed time for painting.

Step 5: Present to Her

Send her **one prescription at a time:**

1. **Pick the highest-payoff one first.** (Usually meal planning or decision-making.)
 2. **Send her just that prescription card.** (Not all 3 at once.)
 3. **Ask her to try it once.** (No commitment. Just one experiment.)
 4. **Wait a week.** (See if she actually uses it and finds it helpful.)
 5. **Then send the next one.** (Only if she's asking or comfortable.)
-

Tone Guidelines

- ✓ Warm, encouraging, non-technical
 - ✓ Acknowledge her struggle ("You're juggling a lot")
 - ✓ No "learn AI" language
 - ✓ Specific time savings (not "increases efficiency")
 - ✓ Permission to try once, no pressure
 - ✓ Focus on outcomes (more painting time, less stress)
-

Example Email to Send Her

Subject: **Your AI Playbook Results + First Prescription** 🎨

Hi [Name],

I've analyzed your playbook, and I've got good news: your biggest bottleneck (meal planning) is totally solvable with one simple tool.

See the prescription card below. It's designed specifically for you and your situation.

The challenge: You spend 3+ hours every week planning meals from scratch. No system. No learning curve.

The solution: A 5-minute AI tool that generates your week's meals + shopping list.

Your only job: Try it once this week. That's it. Notice how much time you save. Then decide if you want to use it every week.

No pressure to learn anything. No setup required beyond one copy-paste.

[PRESCRIPTION CARD HERE]

Let me know how it goes! Once you've tried this one, I have two more ideas that'll help with bills/decisions and getting your Saturday afternoons back for painting.

You've got this. ❤️

Common Responses & How to Reply

"This seems too good to be true." → "It's not magic—it's just AI being useful. Try it once, see what you think."

"I don't have time to learn new software." → "You don't need to learn anything. Open the website, type your question, copy the answer. That's it."

"What if it's not right?" → "Then we try something else. This is an experiment, not a commitment. One week trial."

"I'm worried I'll do it wrong." → "You can't do it wrong. Honestly. Try it and see what happens."

Success Metrics

She's succeeding if:

- ✓ She tries it at least once
- ✓ She notices *some* time savings (even 15 min is a win)
- ✓ She asks for the next prescription (indicates confidence)
- ✓ She eventually has time for painting again (the real goal)

Done. You're ready. Send her the HTML file + guide today.
