

TEE — Mission Control: Complete User Guide

App URL: teegantt-ecmihrmj.manus.space

What This App Is

This is your personal **Bolivia Pre-Departure Mission Control** — a Gantt board and daily execution engine built around one goal: getting your UK affairs in order as fast as possible so you can depart to Bolivia for ESL volunteering and your ayahuasca retreat at Pisatahua. It has two modes:

Mode	Purpose
FOCUS MODE (default)	Daily cockpit — tells you exactly what to do right now
PLAN VIEW	Full Gantt timeline — for weekly planning and reviewing the big picture

Part 1 — FOCUS MODE (Your Daily Driver)

How to Open It

The app opens in FOCUS MODE automatically every time. You will see:

- A **top bar** with your readiness score, time filter, DUMP button, and PLAN VIEW toggle
- A **NOW anchor** — your current task, large and prominent at the top
- A **task list** below — everything you can act on right now, in priority order

The Top Bar — Left to Right

Element	What it does
 FOCUS MODE logo	Confirms you are in daily execution mode
Readiness bar + %	Your overall departure readiness score. Starts low, grows as you complete tasks. Red →

	Amber → Green
TODAY / THIS WEEK / ALL	Time filter — controls which tasks appear in the list below
0 DONE / 17 READY	Running count of completed and actionable tasks
 DUMP	Opens the AI Brain Dump panel (see Part 3)
 PLAN VIEW	Switches to the full Gantt timeline

The NOW Anchor

The large section at the top of the screen is your **cognitive anchor** — it always shows the single most important task you should be working on right now.

It contains:

- **NOW label** with a pulsing green dot — confirms this is your active task
- **Task title** — large, bold, impossible to miss
- **Mission Role badge** — e.g. BLOCKERS, MAINTENANCE, DEPARTURE
- **Status badge** — URGENT, ACTIVE, PLANNED, etc.
- **Notes** — context about why this task matters
- **Progress bar** — how far along this task is
- **Subtask buttons** — click any subtask to tick it off. Completed ones show with a strikethrough. Progress updates automatically.
- **NEXT AFTER THIS** — top right of the anchor, shows the one task coming after this one so you always know what follows

The Task List

Below the NOW anchor is your prioritised list of everything you can act on right now — filtered to only show **unblocked tasks** (tasks whose dependencies are already done or not required).

Each row shows:

Element	Meaning
Number	Priority order — #1 is your current task

CURRENT badge	Marks the top task as your active focus
Task title	Click anywhere on the row to expand it
Mission Role badge	Colour-coded area (BLOCKERS, MAINTENANCE, FUNDING, ENVIRONMENT, DEPARTURE, OUTPUT, ALIGNMENT)
Subtask count	e.g. "0/3 subtasks" — how many are done
Progress bar	Small coloured bar showing % complete
Status badge	URGENT (red), ACTIVE (cyan), PLANNED (blue)
✓ button	Click to mark the entire task as DONE instantly

Tasks are sorted by: Urgent first → Active → Planned → then by start date.

Time Filter: TODAY / THIS WEEK / ALL

Filter	Shows
TODAY	Only tasks that are scheduled for right now (current week)
THIS WEEK	Tasks for this week and the next 2 weeks — recommended for daily use
ALL	Every unblocked task regardless of timeline

Recommended: Keep it on **THIS WEEK** for daily use. Switch to **ALL** when you want to see everything available.

Expanding a Task

Click any task row to expand it and see:

- Full notes
- All subtasks with tick buttons
- Progress slider (drag to set % manually)
- Status selector (URGENT / ACTIVE / PLANNED / PAUSED / DONE)

- Edit button (pencil icon) to change title, dates, duration
- Dependency list — which tasks this one depends on
- Delete button (trash icon) — removes the task after confirmation

Marking a Task Done

Two ways:

1. **Quick mark** — click the **✓ button** on the right of any task row. The task disappears from the list and the next task moves up.
2. **From expanded view** — change status to **DONE** using the status selector inside the expanded task.

When you mark a task done, any tasks that were waiting on it (blocked by it) will automatically become visible and actionable in the list.

Mission Roles — Colour Guide

Colour	Role	What it covers
 Red	BLOCKERS	Legal dispute, CICA application — things stopping everything else
 Green	MAINTENANCE	Health — GP, dentist, optician, dog health, vaccinations
 Amber	FUNDING	Financial — stock liquidation, Airbnb setup, budget, Pardner
 Orange	ENVIRONMENT	Practical — home renovation, clearance, furnishing
 Blue	DEPARTURE	Travel — visa, passport, flights, trip planning
 Pink	OUTPUT	Vocational — ESL prep, Pisatahua content, blog, Amazon Crafts
 Purple	ALIGNMENT	Spiritual — Gnostic Eye, retreat preparation

 Grey	ON HOLD	Paused projects — Pardner scheme
--	---------	----------------------------------

Part 2 — PLAN VIEW (Your Weekly Map)

How to Open It

Click  **PLAN VIEW** in the top bar of Focus Mode.

What You See

A full horizontal Gantt timeline showing all 15 projects and 35+ tasks across April–August 2026, colour-coded by Mission Role.

The Top Bar in Plan View

Element	What it does
Departure countdown	Days until your target Bolivia departure
Readiness bar	Same score as Focus Mode
Blocker warnings	Red alerts for tasks whose dependencies are overdue — click to jump to the task
URGENT / ACTIVE / PLANNED / PAUSED counts	Task status summary
LEGEND button	Shows the colour key
 CHECKLIST button	Opens the pre-departure checklist (see Part 4)
 FOCUS button	Returns to Focus Mode
+ TASK button	Add a new task manually

Reading the Timeline

- **Left column** — task names grouped by project
- **Right panel** — scrollable weekly timeline (scroll left/right)
- **Cyan column** — current week, always highlighted

- **Coloured bars** — each bar is one task. Length = duration. Fill = progress.
- **Red dot** on a bar — task is URGENT
- **Diamond** ♦ — milestone marker (e.g. "Flat Airbnb-Ready", "Depart Bolivia")
- **Dashed arrows** — dependency links between tasks

Navigating the Timeline

- **Scroll right** to move forward in time (toward Bolivia departure)
- **Scroll left** to go back
- **Click any bar** to open the task detail panel on the right

Collapsing Project Groups

Click any project header row (e.g. "Legal Dispute") to collapse/expand that group and reduce visual clutter.

Filtering in Plan View

Use the filter bar below the header to show only specific Mission Roles or statuses. Click **ALL** to reset.

Part 3 — AI Brain Dump (⚡ DUMP)

This is the most powerful feature. Instead of manually creating tasks, you just dump your thoughts and the AI structures everything for you.

How to Use It

1. Click ⚡ **DUMP** in the top bar of Focus Mode
2. A panel slides up with a large text box
3. Type or paste anything — messy thoughts, voice note transcripts, partial plans, repeated ideas — it doesn't matter how unstructured it is
4. Click ⚡ **EXTRACT TASKS**
5. Wait a few seconds while the AI processes your input
6. A review screen appears showing all extracted tasks

What the AI Does

- **Extracts** discrete tasks from your unstructured text

- **Breaks** large goals into single-session subtasks
- **Assigns** each task to a Mission Role (BLOCKERS, MAINTENANCE, etc.)
- **Sets** a status (URGENT, ACTIVE, PLANNED)
- **Builds** dependency chains (e.g. "sort dog health" must come before "find dog carer")
- **Detects duplicates** — if a task already exists in your board, it flags it as DUPLICATE so you don't add it twice

The Review Screen

Each proposed task shows:

- **Checkbox** — pre-ticked for new tasks, unticked for duplicates
- **Task title**
- **Mission Role badge**
- **Status badge**
- **Subtask count**
- **Dependency count**
- **Notes** — the AI's reasoning

You can:

- **Tick/untick** individual tasks to include or exclude them
- **Select all** non-duplicates with one click
- **Clear** all selections
- Click ← **Re-dump** to go back and edit your input

Confirming Tasks

Click ✓ **ADD [N] TASKS** to save your selected tasks. They are:

1. Saved to the database permanently
2. Added to your Focus Mode task list immediately
3. Inserted into the Gantt timeline in Plan View

Example Brain Dump Inputs

Good examples:

"I keep forgetting to call the vet about the dog's skin. Also need to list the kitchen stuff on eBay before I can clear the living room. And I should check my passport expiry date."

"The CICA form needs the medical questionnaire filled in first. I also need to send a SAR to my GP. Both are urgent."

"I want to write the introduction for the Pisatahua retreat page. It's for the CEO. Should be done before I start the natural products blog post."

The AI handles all of this — you just dump.

Part 4 — Pre-Departure Checklist

How to Open It

In Plan View, click  **CHECKLIST** in the top bar.

What It Shows

A flat, printable list of all your tasks grouped into pre-departure phases:

Phase	Tasks
NOW — Urgent	Everything marked URGENT that needs immediate action
May	Tasks scheduled for May 2026
June	Tasks scheduled for June 2026
July — Departure	Final pre-departure tasks
On Hold	Paused projects (Pardner, Gnostic Eye)

Ticking Off Tasks

Click any task in the checklist to mark it complete. The tick saves to your board.

Printing

Click  **PRINT** to open a clean print dialog. The checklist is formatted for A4 printing — no navigation bars, no colours, just a clean task list you can carry with you.

Part 5 — Adding and Editing Tasks Manually

Adding a New Task

In Plan View, click **+ TASK** in the top bar. A form appears where you enter:

- Task title
- Mission Role (area)
- Status
- Start week and duration
- Notes

Editing an Existing Task

Click any task bar in Plan View or any task row in Focus Mode to open the detail panel. Then:

- **Hover over the title** to reveal the  edit icon — click to rename
 - **Start week** — edit the number to reschedule
 - **Duration** — edit the number of weeks
 - **Dependencies** — use the searchable dropdown to add or remove dependency links
 - **Status** — click any status badge to change it
 - **Progress** — drag the slider
 - **Notes** — click the notes area to edit inline
 - **Subtasks** — click **+ Add subtask** to add a new one; click **×** next to any subtask to delete it
 - **Delete task** — click the  icon in the panel header, then confirm
-

Part 6 — Daily Workflow (Recommended Routine)

This is the simplest way to use the app every day without overthinking it:

Morning (2 minutes):

1. Open the app — it loads in Focus Mode automatically
2. Read the **NOW anchor** — that is your task for this session
3. Check **NEXT AFTER THIS** — so you know what follows
4. Note your **readiness %** — watch it grow over time

During the day:

1. Work on the NOW task

2. Tick off subtasks as you complete them
3. When the task is done, click ✓ — the next task automatically moves up
4. If you have a new thought or remember something, click ⚡ **DUMP** and brain dump it immediately — don't try to organise it yourself

Weekly (10 minutes):

1. Switch to 📋 **PLAN VIEW**
 2. Check the **blocker warnings** — anything overdue?
 3. Review the **milestone diamonds** — are you on track for Flat Airbnb-Ready and Dog Care Confirmed?
 4. Check the **departure countdown** — is the date realistic?
 5. Do a brain dump of anything that came up during the week
-

Part 7 — Saving Your Progress

How Data is Saved

- **All edits** (subtask ticks, progress, status changes, notes) save **automatically** as you make them
- **Brain dump tasks** are saved to the **database** — they persist across all devices and browsers
- **Manual edits** (progress sliders, status changes, notes) are also saved to **local storage** in your browser as a backup

Accessing on Multiple Devices

Open teegantt-ecmihrmj.manus.space on any device — phone, tablet, or laptop. Brain dump tasks sync via the database. For full cross-device sync of all edits, the app can be upgraded to full database sync (ask Manus).

Saving to Your Home Screen

iPhone/iPad: Open in Safari → tap the Share icon → "Add to Home Screen"

Android: Open in Chrome → tap the three-dot menu → "Add to Home Screen"

Desktop: Bookmark the URL (Ctrl+D / Cmd+D) or pin the tab

Part 8 — Quick Reference Card

Action	How
See your current task	Look at the NOW anchor (top of Focus Mode)
Tick off a subtask	Click the subtask button in the NOW anchor or expanded task
Mark a task done	Click the ✓ button on the right of any task row
Add a new thought	Click ⚡ DUMP → type → Extract Tasks → confirm
Switch to full timeline	Click 📅 PLAN VIEW
Return to daily focus	Click 🎯 FOCUS
Filter by time	Click TODAY / THIS WEEK / ALL in the top bar
Edit a task	Click it → hover title for ✎ → edit fields
Delete a task	Click it → click 🗑️ → confirm
Print your checklist	Plan View → ✈️ CHECKLIST → 🖨️ PRINT
Check departure readiness	Readiness bar in top bar (both modes)
See what's blocked	Blocker warnings in Plan View top bar
Add a dependency	Click task → Dependencies dropdown → search and select

Part 9 — Understanding Your Departure Readiness Score

The %**READY** score in the top bar is calculated from:

- All tasks that are not paused or on hold
- Each task's progress % (0–100)
- Completed tasks count as 100%

What the colours mean:

Colour	Score	Meaning
● Red	0–39%	Early stage — many urgent tasks still untouched

 Amber	40–74%	Mid-stage — good progress, key blockers still open
 Green	75–100%	Near-ready — final preparations in progress

Your score will rise as you:

- Tick off subtasks
- Mark tasks complete
- Progress through the BLOCKERS and MAINTENANCE roles (these carry the most weight)

Guide version: April 2026 — TEE Mission Control v3.0
