

Yes — this could become a strong Marketplace template, but it needs to be **productised** first. Right now it is still too personalised to your real inbox, accounts, platforms, and agent setup.

Short answer

Yes, I can help you turn it into a sellable Notion Marketplace template.

The product should probably be positioned as:

AI Email Command Center

A Notion template + AI agent operating system that turns messy inboxes into a daily command brief, with safe routing rules, decision logs, and human approval.

What needs changing before Marketplace

1. Remove your personal data

The current guide includes your actual email accounts, platforms, senders, and business details.

Before selling, it needs a public-safe version with placeholders like:

- yourname@gmail.com
- business@email.com
- [Primary inbox]
- [Imported account]
- [Marketplace platform]
- [Bank/payment provider]
- [Selling channel]

Anything specific to you should either be removed or moved into an **example/demo section**.

2. Split it into buyer-friendly pages

The current page is good as an internal operating guide, but Marketplace buyers need a cleaner structure.

I'd turn it into a template with these pages:

1. Start Here

- What this system does
- Who it is for
- How to use it safely

2. **Daily Email Command Brief**
 - The daily dashboard / output page
 3. **Routing Rules**
 - Keep in inbox
 - Needs reply
 - Action required
 - Finance/security
 - Archive candidates
 - Come Back Later
 4. **AI Agent Instructions**
 - The prompt/instructions users paste into Notion AI, ChatGPT, Claude, Manus, etc.
 5. **Email Review Log**
 - Database for important emails
 6. **Platform / Opportunity Log**
 - Optional database for resellers, creators, freelancers, or business leads
 7. **Subscriptions & Tools Log**
 - Tracks app signups, renewals, trials, failed payments, cancellations
 8. **Feedback Log**
 - Where the user teaches the AI better rules over time
 9. **Setup Checklist**
 - Connect inbox
 - Add priority senders
 - Choose routing rules
 - Run first daily review
 - Add corrections
-

3. Make it less “custom agent only”

Not every Marketplace buyer will have access to the same kind of custom Notion agent setup.

So the product should support three levels:

Level	Buyer setup	What they can do
Basic	Copy/paste emails into AI	Manual daily brief
Intermediate	AI assistant with inbox access	Semi-automated triage
Advanced	Custom Notion/email agent	Automated daily command brief

That makes it more sellable because it works for more people.

4. Rename it for buyers

Possible names:

1. **AI Email Command Center**
2. **Daily Inbox Command System**
3. **Inbox-to-Action AI Dashboard**
4. **AI Email Manager OS**
5. **Email Triage Command Center**
6. **Inbox Control Room**
7. **The Daily Email Briefing System**

My strongest pick:

AI Email Command Center

Subtitle:

Turn messy emails into a daily action brief with AI, routing rules, and human approval.

5. Define the audience

You could sell it broadly, but I think your best version is for practical business users, not just productivity nerds.

Best target buyers:

- Resellers
- Small business owners
- Freelancers
- Marketplace sellers
- Digital product sellers
- Creators managing brand/platform emails
- People with several inboxes
- People overwhelmed by notifications, receipts, newsletters, and customer messages

Positioning:

For solo operators who need email to become decisions, not noise.

Marketplace product angle

Core promise

Stop checking email all day. Review one AI-generated command brief instead.

Buyer pain points

- Too many emails across multiple accounts
- Missing important payment/security/customer messages
- Newsletters and promos burying real actions
- No consistent way to teach AI what matters
- Inbox zero systems are too rigid
- AI tools feel risky because they might take action too freely

Your differentiator

Most email templates say “sort your inbox.”

Yours says:

AI suggests. Human decides. Rules improve over time. Important activity gets logged.

That safety angle is strong.

What I’d create next

I’d make a clean public template version called:

AI Email Command Center — Marketplace Template

It would include:

- Public-safe copy
 - Generic sample routing rules
 - Example daily brief
 - Setup checklist
 - AI prompt pack
 - Feedback log
 - Optional database structure
 - “Human approval required” safety rules
 - Marketplace listing copy
-

Suggested Marketplace listing copy

Title

AI Email Command Center

Short description

Turn a messy inbox into a clear daily action brief using AI, routing rules, and human approval.

Longer description

AI Email Command Center is a Notion system for reviewing emails without living in your inbox. Use it to sort messages into replies, actions, finance alerts, security checks, subscriptions, platform notifications, archive candidates, and review items.

The system includes routing rules, a daily command brief format, an AI prompt/instructions page, feedback logs, and optional databases for tracking important email events. It is designed around a safe human-in-the-loop workflow: AI summarises and recommends, but you stay in control of final actions.

What's included

- Daily Email Command Brief template
- AI email triage prompt
- Routing Rules database/page
- Feedback Log
- Email Review Log
- Subscriptions & Tools Log
- Platform Activity Log
- Setup Checklist
- Example daily summary
- Safety rules for human approval

Best for

- Small business owners
 - Resellers
 - Freelancers
 - Creators
 - Digital product sellers
 - Anyone managing multiple inboxes
-

Important Marketplace warning

Do **not** market it as a fully automatic email agent unless the buyer definitely has the same Notion/email access.

Better wording:

Works as a manual AI prompt system, a semi-automated workflow, or a custom agent operating guide depending on your tools.

That avoids overpromising.

My recommendation

Turn your real agent into **two versions**:

1. **Private version** — your live email agent guide with your real inboxes and rules.
2. **Marketplace version** — clean, generic, beginner-friendly template.

The Marketplace version should be simpler, safer, and more polished than your private operating guide.

AI Email Command Center — Starter Template

We start by turning this from **your private working system** into a **clean public product blueprint**.

Step 1: Decide the product version

I'd start with the simplest sellable version:

AI Email Command Center — Starter Template

Not “fully automated agent” yet. That comes later as an advanced upsell.

Why? Because Marketplace buyers may not have your exact custom agent setup, inbox permissions, or automations. A starter version can work for more people.

Step 2: Build the public template skeleton

The first page we should create is the **Marketplace Template Home**. It should contain:

1. **Start Here**
2. **How this system works**
3. **Setup Checklist**
4. **Daily Email Command Brief**
5. **Routing Rules**
6. **AI Prompt / Agent Instructions**
7. **Feedback Log**
8. **Email Review Log**
9. **Subscriptions & Tools Log**
10. **Platform / Opportunity Log**
11. **Example Daily Brief**
12. **Marketplace Listing Copy**

Step 3: Strip out private details

We should replace your private details with reusable examples.

For example:

Private version	Marketplace version
walkerlouisha5@gmail.com	primary@email.com
walkersfam2025@gmail.com	secondary@email.com
Vinted / Gumtree / Nextdoor	Marketplace platforms
Suits Me / Halifax / PayPal	Bank / payment provider
TEE	You / user
Dreamy Deals Leeds UK	Your business

Step 4: Make it buyer-friendly

Your current page is powerful, but too advanced for a buyer opening it cold.

The public version needs to feel like:

“I can duplicate this and use it today.”

So we need:

- plain-English setup steps
- clear prompts
- examples
- safe-use rules
- optional advanced sections
- minimal technical assumptions

Step 5: Create the first product page

The best first practical move is to create a new page called:

AI Email Command Center — Marketplace Template Draft

Inside it, we can add the clean structure and then build each section.

Suggested build order

1. **Create the Marketplace Template Draft page**
2. Add the **Start Here + Safety Rules**
3. Add the **Daily Brief template**
4. Add the **Routing Rules template**
5. Add the **AI prompt pack**
6. Add example databases / logs
7. Add Marketplace listing copy
8. Review for private data

9. Turn into final duplicate-ready template

My recommendation

Start with a **manual-first version**:

Copy emails → paste into AI → AI creates command brief → user decides actions.

Then add optional sections:

- “If your AI has email access”
- “If you use a custom Notion agent”
- “If you are a reseller / marketplace seller”

That gives you a product that is safer, easier to understand, and easier to sell.
